PROFESSIONAL SUMMARY

Frontend Engineer with **2.7+ years** of production experience building enterprise-scale **React.js** and **TypeScript** applications, including micro-frontend architectures. Delivered end-to-end e-commerce features — PLP, PDP, plan comparison flows, **Affirm & third-party payment integrations**, offer timers, dynamic filtering — for Verizon's Visible platform, achieving a **25% lift in user engagement** and **30% faster page loads**. Built shared React component libraries, an LLM-powered test automation framework (**40% QA effort reduction**), and AI-integrated dashboards. Recognised as **Performer of the Month** and served as Team Lead on the CRM Capstone. Strong full-stack exposure enables deeper API collaboration and system-level thinking.

TECHNICAL SKILLS

Frontend: React.js (v18), TypeScript, JavaScript ES6+, HTML5, CSS3, Micro-Frontend Architecture, Responsive Web Design
UI & Performance: Core Web Vitals, WCAG 2.1 Accessibility, Cross-Browser (Chrome, Safari, Firefox, iOS, Android), Figma-to-Code
State & Integrations: REST API Integration, Affirm Payment, Third-party Services, Dynamic Data Rendering, Component-Based Architecture
Testing & Automation: Jest, Unit Testing, Integration Testing, LLM-based Automated Test Generation
Backend & APIs: Java, Spring Boot, Python, RESTful API Design, MySQL, MongoDB, Elasticsearch
DevOps & Cloud: Git, GitLab CI/CD, Docker, Jenkins, AWS, Kibana, SonarQube, Streamlit
AI & Productivity: Google Gemini AI (fine-tuned on JSON/tabular data), GitHub Copilot, OpenAI API, Claude (Anthropic)
Tools & Workflow: Jira, VS Code, Figma, Agile/Scrum, Code Reviews, Sprint Planning

WORK EXPERIENCE

Associate Software Engineer — Frontend

Aug 2023 – Present

Infinite Computer Solutions (Client: Verizon Wireless) • Hyderabad, India

Project VISIBLE — Verizon E-Commerce Platform (Micro-Frontend)

Dec 2024 – Mar 2025

Stack: TypeScript, React.js, Micro-Frontend • Team: 10

- Engineered fully responsive PLP, PDP, and Plan Listing Pages for Verizon's Visible platform — handling product sorting, dynamic filters, add-to-cart, promotional banners, deal timers, and plan comparison flows across web and mobile.
- Integrated Affirm and additional third-party payment solutions, implementing complete EMI and payment option flows with dynamic UI behaviour adapting to live offer states.
- Optimised React component rendering and CDN asset delivery inside a micro-frontend architecture, cutting page load time by 30% and achieving green Core Web Vitals across all metrics.
- Implemented pixel-perfect Figma designs with cross-browser consistency validated on Chrome, Safari, Firefox, iOS, and Android — driving a 25% lift in user engagement.
- Integrated 10+ REST API endpoints for real-time product and pricing data, co-designing API contracts with backend teams to minimise data latency.

Project ELVIS — Customer Financing & Device Payment Platform

Aug 2024 – Sept 2025

Stack: React.js, Shared Component Architecture • Team: 6

- Designed and developed the device payment options page — focused on data accuracy, usability, and seamless plan-selection UX across customer financing tiers.
- Architected a shared React/TypeScript component library adopted across 3+ internal product teams, reducing redundant development by ~20%.
- Managed tight REST API integrations with robust post-deployment validation to ensure accurate dynamic data rendering in production.

- Simplified multi-step customer financing forms, reducing user drop-off by cutting the interaction journey from 7 steps to 4.
 - Improved WCAG 2.1 accessibility compliance and cross-device responsiveness via systematic UI audits across 15+ critical screens.
- ★ **Recognised as Performer of the Month for ownership of critical features and consistent delivery of production-ready, high-quality code.**

Project SRE — Site Reliability Engineering (Internal POC)

Jan 2023 – Jul 2024

Stack: React.js, Java, Python, Gemini AI, Streamlit, MySQL, Elasticsearch • Team: 6

- Built a full-stack Incident Management Tool: developed the React.js UI, fine-tuned a Google Gemini AI model on JSON and tabular incident data for intelligent query responses, and embedded a Streamlit analytics app via iframes.
- Implemented interactive bar, pie, and line chart dashboards in React.js for real-time SRE observability and incident trend analysis.
- Developed REST APIs connecting the React frontend to MySQL and Elasticsearch backends; supported Kibana-based monitoring dashboards.

Library Management System — Full-Stack POC

Dec 2023 – Jan 2024

Stack: React.js, Java, Python, MySQL • Team: 2

- Designed and built UI components for Dashboard, Books Management, Member Management, Transaction Management, and User Management modules.
- Integrated REST APIs for full-stack book availability tracking and member transaction workflows; implemented a chatbot interface for natural-language library queries.
- Visualised data using bar, pie, and line graphs for books, members, and transaction management pages.

Intelligent Testing Framework — LLM-Powered POC

1 Month

Stack: Python, React.js, MySQL, Jenkins • Team: 7

- Contributed to designing an LLM-based unit test generation pipeline that scans Git repos and auto-generates unit test cases for .java, .py, and .js files — reducing manual QA effort by 40% across the team.
- Developed the responsive React.js UI for the test generation application, including file-type detection views and test output display.

Infinite Test Catalog — E2E Test Flow Builder POC

1 Month

Stack: React.js, Python, MySQL, Jenkins, Docker • Team: 7

- Built a responsive React.js UI that ingests a Git repository URL, extracts modules, and displays associated domains, subdomains, and test cases for each module.
- Implemented drag-and-drop functionality enabling users to intuitively combine test cases across parent-child module relationships and generate customised end-to-end test flows.

Employee Management Application — POC

2 Weeks

Stack: React.js, Python, MySQL, Jenkins, Docker • Team: 3

- Designed responsive UI for Employee Profiles, Timesheets, and Pay Slips pages with full CRUD operations, enabling HR teams to manage employee data and timesheet entries efficiently.

CRM — Customer Relationship Management (Capstone Project)

1 Week

Stack: React.js 18, Spring Boot, Java, MySQL, AWS, Jenkins • Team: 5

- Served as Team Lead: directed the development team, assigned tasks, coordinated delivery, and ensured timely, high-quality UI component output.
- Designed the static Home Page and Products Page; oversaw frontend-backend integration across admin and user modules (product browsing, support tickets, FAQs).

EDUCATION

B.Tech — Computer Science Engineering

2019 – 2023

Swarna Bharathi Institute of Science and Technology, Telangana | JNTU | CGPA: 7.9 / 10.0

Intermediate — Mathematics, Physics & Chemistry (MPC)

2017 – 2019

Sri Chaitanya Junior College, Telangana | TSBIE | CGPA: 9.4 / 10.0

Secondary School Certificate (SSC / 10th Grade)

2016 – 2017

Bomma Brilliant Grammar School, Telangana | TSBSE | CGPA: 9.2 / 10.0

CERTIFICATIONS & TRAINING

-
- Java Backend Development — Pioneer Business Solutions | Sep 2023 – Nov 2023 (Endorsed by Infinite Computer Solutions)
 - Data Science & Data Visualization with Python — Swecha Organization | May 2022 – Jun 2022
 - Cloud Computing — Solvency Software Solutions Pvt. Ltd. | Dec 2021 – Feb 2022
 - TCS Career Edge — Young Professional

AI & INNOVATION HIGHLIGHTS

- Fine-tuned Google Gemini AI on domain-specific JSON and tabular incident data and integrated it into a live SRE production tool — hands-on LLM customisation rare for a frontend engineer.
- Architected an LLM-powered unit test generation framework from scratch (no off-the-shelf tool) — scans repositories, detects file types, and generates language-specific unit tests automatically.
- Bridged data science and production frontend by embedding Streamlit analytics apps inside React applications via iframes — enabling non-technical stakeholders to access ML dashboards through the main product UI.
- Built drag-and-drop E2E test flow builders and interactive chart dashboards (bar, pie, line) — demonstrating product-level UI thinking beyond standard feature development.
